DETAILED ACTION***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

1. Claims 1,2, and 5-20 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-5,7,9-14,16, and 17 of U.S. Patent No. 6,416,519. Although the conflicting claims are not identical, they are not patentably distinct from each other because the scope of both sets of claims covers the same structures, including a sheath, deformable legs that have a curved cross-section, and an actuating means.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3731

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent No. 6,183,482 to Bates et al., *as evidenced by US Patent No. 5,658,296.*

Bates discloses a device that includes a sheath (14), four legs (10) that define a basket in a deployed position, and actuating means (12). As shown in Figure 8E, the legs can have a cross-section shape that includes a concave surface and a convex surface. Bates describes the stowed position of the basket in the sheath and the deployment of the legs by the actuation handle without any assistance of a second component (column 4, lines 8-33). Bates describes many different functions of the device in lines 12-17 of column 4.

Figures 5A and 6A show the legs lying parallel to one another in the stowed position. The exterior surface of the legs in Figure 6A defines a circular shape. Replacing the flat inside surfaces of the legs in Figure 6A with the concave surfaces of Figure 8E (column 5, lines 42-45), a circular opening is defined between the legs in the stowed position.

Regarding claims 4 and 15: Bates explains that the basket can have a helical shape, as shown in Figure 2 of US Patent No. 5,658,296 (*which is incorporated by reference – see column 4, lines 45-50*).
